Custom-fit audio options

## Personal Audio Monitors

Personal Audio Monitors eliminate the need for traditional stage monitor wedge speakers. They provide lower stage volume for the performer, truer sound for the audience and less equipment to purchase and transport. Listen Hear's in-ear, custom-fit earpieces provide unmatched comfort and secure fit with unique, low-profile styling and up to 26 dB of sound isolation from ambient sounds for protection and enjoyment. They are also ideal for MP3 players, iPod®, computer or gaming systems.

## Custom Mini Monitors

For individuals seeking rich sound quality and superior long wear comfort from MP3 players, including iPod®, and other audio equipment at an affordable price. Combines dynamic micro-driver technology with a custom-fit soft-gel silicone earpiece. Listen Hear's acoustic design makes lower volumes more satisfying to protect hearing. The secure fit keeps the buds in place while jogging or at the gym. The sound isolating feature of Custom Mini Monitors makes them ideal for flying and other noisy environments.

## MP3 Earbud Molds

The acoustic design optimizes sound quality of standard in-ear headphones that come with MP3 players, including iPod®, and other audio equipment. They also make lower volumes more satisfying to protect hearing. The secure fit keeps the buds in place while jogging or at the gym.

## Musicians Earplugs

For a musician, hearing isn't just a means of communication; it's a way of life. Yet constant exposure to high sound levels can affect a musician's ability to make crucial sonic adjustments during a performance. Musicians Earplugs attenuate across all frequencies rather than just low and mid range frequencies, making music more clear and natural sounding. Available with 9 dB, 15 dB and 25 dB filters, depending on use.
